

UNI ARCHIVE TEST DOCUMENT

Course: CS301 - Database Systems

Document Type: Lecture Notes

Database normalization is the process of organizing data in a database to reduce redundancy and improve data integrity. Normal forms include 1NF, 2NF, 3NF, and BCNF.

Relational databases use tables, primary keys, and foreign keys to maintain relationships between records. SQL is used for querying and managing structured data.

Artificial Intelligence Notes

Machine learning enables computers to learn patterns from data. Neural networks and deep learning are important AI techniques.
